RE: OHIO F5-8203-06  
Elyria/Woodford Road Quarry

EPA Region 5 Records Ctr.

373675

Today, Scott Byram and I inspected the above referenced facility with members of the OEPA. The purpose of the visit was to determine the feasibility of including this site in the Mitre Drilling Program. We arrived at the site at 2:35 p.m. The site is located on Woodford Road approximately 2 blocks north of the city garage on Garden Street. A creek flows along the south side of the site and railroad tracks run along the east side. The site was registered as a quarry although this is probably not the case. This area appears to be a topographic low which may lie on bedrock. We staked four locations for borings. Water was flowing in the creek although this area has not received any rain for 2 weeks. This might indicate a groundwater discharge zone and flow to the south or east. Swamp areas exist to the south. Apparently the creek flows east to the Black River. OEPA decided that they would like this site drilled for the Mitre Drilling Program.
